

## Installation Guide for the DBM Transcripts for Mac

Download Mac\_DBM\_Transcripts\_Updated\_5-9-20.zip file from the link on the [deanbibleministries.org](http://deanbibleministries.org) website to your hard drive. It should download to your Downloads folder. If the file doesn't automatically unzip, double-click the zip file in the Downloads folder, which should launch the unzip program. Once unzipped, the DBM Transcripts folder will be in your Downloads folder.

In Finder you can click and hold on the DBM Transcripts folder and drag it to your desktop (or other location on your hard drive).

To launch the DBM Transcripts application, double click on the DBM Transcripts folder. This will open a Finder

window with the list of files in the root folder for the DBM Transcripts application. Look for the file called **index.html**. Double click it and it will launch the DBM Transcripts application in your default browser.

You can also create a shortcut for the **index.html** file and placing it on your desktop for easy access. To do this, right click on the **index.html** file in Finder, then select Make Alias from the flyout menu. That will create a file called **index.html alias** in your DBM Transcripts folder. You can then drag that file to your desktop and rename it to something like **DBM Transcripts.html**. Then double click the new **DBM Transcripts.html** file on your desktop to launch the DBM Transcripts application in your default browser window.
